Costa Rica

Ecostudio Architects was founded in 2004 and has since been committed to creating the highest quality development projects. Each one is progressed from the initial conceptual phase right through its architectural exploration to result in the most environmentally friendly and energy efficient buildings.

Triangulo Residence in Costa Rica is an excellent example of an award-winning architectural project by Ecostudio Architects. Glass is used extensively in the design giving a wonderful openness to the building and converting the living area and terrace into one vast space. This open plan theme is continued as the living room, dining room and kitchen have no walls dividing them whatsoever. The

kitchen is directly on to the terrace and has been given a very high roof with a skylight allowing hot air to rise and move out to keep the temperature comfortable at all times. An impressive steel stairway formed from a complete sheet bent to make the steps, creates a 'flying sculpture' within the main body of the house.

Outside and to the rear of the property, a large, attractive terrace connects the infinity swimming pool and deck area. Sunsets from the deck are particularly impressive and the property's location five minutes from Ostional beach where turtles come to lay their eggs and San Juanillo beach, 10 minutes in the opposite direction, forms a perfect location for such a superb residence.
